Git maven pipeline

Install maven on ubuntu vm

apt install maven -y

```
pipeline {
    agent any

    stages {
        stage('SCM code') {
            steps {
                git 'https://github.com/amitvermaa93/jenkins-git-integration.git'
            }
        }

        stage('Build') {
            steps {
                sh 'mvn clean package'
            }
        }
        stage('Publish') {
            steps {
                // Add steps to publish artifacts or deploy the application
                // For example, you can use the 'archiveArtifacts' step to archive built
artifacts
                archiveArtifacts 'target/*.war'
```

```
        }
      }
    }
}
```
