Pipeline conditional statement

```
pipeline {
    agent any

    stages {
        stage('Check Ansible Existence') {
            steps {
                script {
                    def ansibleExist = fileExists('/usr/bin/ansible')

                    if (ansibleExist) {
                        echo "Ansible is installed."
                        // Add steps for Ansible operations here
                    } else {
                        echo "Ansible is not installed."
                        // Add alternative steps or error handling here
                    }
                }
            }
        }
    }
}
```
